The G505T Phase Contrast Trinocular Microscope is a powerful instrument designed for advanced microscopic observation and documentation of unstained or transparent specimens. 1 It features a Siedentopf trinocular head, allowing for comfortable viewing and simultaneous connection to a microscope camera for capturing images and videos. 1 Paired 10X wide-field eyepieces provide a comfortable viewing experience. 1 The set of Plan Phase objectives (10X, 20X, 40X, and 100X), combined with the 10X/40X and 20X/100X phase annuli, delivers high-resolution, high-contrast images, revealing intricate details invisible with standard brightfield microscopy. 1 A precise mechanical stage facilitates smooth and accurate specimen positioning. 2 Kohler LED illumination with intensity adjustment ensures optimal lighting for phase contrast microscopy. 3 The universal 90V-240V power input provides global compatibility. This microscope is ideally suited for demanding applications in biology, microbiology, cell culture, and other fields where visualizing unstained specimens is essential for research and analysis.
